

QUALITATIVE DISCLOSURE ON LIQUIDITY COVERAGE RATIO

The bank has implemented RBI guidelines on Liquidity Coverage Ratio (LCR) from 1st January 2015.

The LCR standard aims to ensure that a bank maintains an adequate level of unencumbered High Quality Liquid Assets (HQLAs) that can be readily converted into cash at little/no loss of value to meet its liquidity needs for a 30-calendar daytime horizon under a liquidity stress scenario.

LCR has two components:

- The value of the stock of High-Quality Liquid Assets (HQLA)–*The Numerator*.
- Total Net Cash Outflows: Total expected cash outflows minus Total expected cash inflows, in stress scenario, for the subsequent 30 calendar days - *The denominator*.

Definition of LCR:

Stock of high quality liquid assets (HQLAs) $\geq 100\%$ (w.e.f 01.04.2021)
Total net cash outflows over the next 30 calendar days

The LCR requirement has become binding on the banks with the following minimum required level as per the timeline given below:

	Jan 1, 2015	Jan 1, 2016	Jan 1, 2017	Jan 1, 2018	Jan 1, 2019
Minimum LCR	60%	70%	80%	90%	100%

For Q1 FY'2025-26, the daily average LCR was 147.72% (based on simple average of daily observations) at consolidated level, as against the regulatory requirement of 100%.

The main drivers of LCR of the bank are High Quality Liquid Assets (HQLAs) to meet the liquidity needs of the bank at all times and basic funding from retail and small business customers. The retail and small business customers contribute about 63.54% of total deposit portfolio of the bank, which attracts low run-off factor of 5%/10% as on 30.06.2025.

Composition of High Quality Liquid Assets (HQLA)

HQLAs comprises of Level 1 and Level 2 assets. Level 2 assets are further divided into Level 2A and Level 2B assets, keeping in view their marketability and price volatility.

Level-1 assets are those assets which are highly liquid. For quarter ended June 30, 2025, the Level-1 asset of the bank includes Cash in Hand, Excess CRR, Government Securities in excess of minimum SLR, Marketable securities issued or guaranteed by foreign sovereign, MSF and FALLCR totalling to Rs. 3,79,575.35 Cr (based on simple average of daily observations).

Level-2A & 2B assets are those assets which are less liquid, and their weighted amount comes to Rs. 6,487.28 Cr (based on simple average of daily observations). Break-up of daily observation Average HQLA during quarter ended June 30, 2025 is given hereunder:

High Quality Liquid Assets (HQLAs)	Average %age contribution to HQLA
Level 1 Assets	
Cash in hand	1.94%
Excess CRR balance	0.48%
Government Securities in excess of minimum SLR requirement	25.57%
Government securities within the mandatory SLR requirement, to the extent allowed by RBI under MSF (presently to the extent of 2 per cent of NDTL)	7.71%
Marketable securities issued or guaranteed by foreign sovereigns having 0% risk-weight under Basel II Standardized Approach	0.96%
Facility to avail Liquidity for Liquidity Coverage Ratio – FALLCR (presently to the extent of 16 per cent of NDTL)	61.66%
Total Level 1 Assets	98.32%
Total Level 2A Assets	1.61%
Total Level 2B Assets	0.07%
Total Stock of HQLAs	100.00%

Concentration of Funding Sources

This metric includes those sources of funding, whose withdrawal could trigger liquidity risks. It aims to address the funding concentration of bank by monitoring its funding requirement from each significant counterparty and each significant product/ instrument. As per RBI guidelines, a "significant counterparty/Instrument/product" is defined as a single counterparty/Instrument/product or group of connected or affiliated counter-parties accounting in aggregate for more than 1% of the bank's total liabilities.

The bank has no significant counterparty (deposits/borrowings) as at 30.06.2025. Top 20 depositors of the bank constitute 4.35% of bank's total Deposit as on June 31, 2025. The significant product/ instrument includes Saving Fund, Current deposit and Core Term Deposit the funding from which are widely spread and cannot create concentration risk for the bank.

Derivative exposure

The bank has low exposure in derivatives having negligible impact on its liquidity position.

Currency Mismatch

As per RBI guidelines, a currency is considered as “significant” if the aggregate liabilities denominated in that currency amount to 5 per cent or more of the bank’s total liabilities. In our case, only USD (17.02 % of bank’s total liabilities) falls in this criterion whose impact on total outflows in LCR horizon can be managed easily as the impact is not large considering the size of balance sheet of the bank.

Degree of centralization of liquidity management and interaction between group’s units.

Punjab National Bank (PNB) has established a Group Risk Management Philosophy and Policy that serves as a guiding framework for all its group entities. This policy is central to how the bank manages risks across the entire group.

At the group level, PNB maintains a zero-tolerance stance toward defaulting on payment obligations. To uphold this commitment, the bank ensures that it holds an adequate liquidity buffer capable of withstanding potential liquidity crises.

PNB also adheres to regulatory standards by maintaining both the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR) at a consolidated level, encompassing the bank and its subsidiaries, in line with its defined risk appetite.

While each group entity is responsible for managing its own liquidity independently, PNB has implemented a Group-wide Contingency Funding Plan. This plan is designed to address liquidity needs across the group during periods of financial stress, ensuring coordinated support and resilience.

LCR Disclosure Template as at 30.06.2025

QUANTITATIVE DISCLOSURE (On consolidated basis { including domestic & foreign subsidiaries})
